

Access control method for car locking

Patent number: FR2759109
Publication date: 1998-08-07
Inventor: HELLEMANS NOEL
Applicant: SIEMENS AUTOMOTIVE SA [FR]
Classification:
- international: E05B49/00; E05B65/36; B60R25/00; G08C17/00; H04B1/034
- european: B60R25/04; G07C9/00E2
Application number: FR19970001389 19970204
Priority number(s): FR19970001389 19970204

Abstract of FR2759109

The method involves activating a remote locking and unlocking unit (11) for the car doors, by activating a command mechanism (13) contained in the remote control unit (11). The unit is arranged on a support (12) which is appropriately located in the vehicle interior. The unit authorises door opening and closing after carrying out a code search, remotely. In order to start the car engine, the remote control unit must be placed in the support attached to the car, and an appropriate signal code must be sent to a computer unit.
